> I committed locally but haven't pushed yet. I want to combine the last two commits into a single commit with a new message 19:57

• Two simple ways:

  1. Quick (recommended when local only)
    • git reset --soft HEAD~2
    • git commit -m "Your new combined commit message"
    • git log -n 1 --oneline

  2. Interactive (lets you edit combined message)
    • git rebase -i HEAD~2
    • In the editor leave the first line as pick and change the second to squash (or s)
    • Save, edit the combined commit message when prompted, save and exit
    • git log -n 1 --oneline

  Note: safe because you haven't pushed. If you had pushed, a force-push would be required.

Accuracy Ranking and Justification

Accuracy Ranking: 10/10 (Very accurate)

Justification: Based on my personal experience testing the command in the terminal, the AI's response is highly accurate. It solved the issue immediately by providing clear, direct, and concise steps that worked perfectly.
